Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2-9-04 has been entered.
2. The amendment filed 2-9-04 has been entered into the record and has been fully considered.
3. Claims 50, 69-70, 73-100 are pending.
4. Applicant's comments in traverse of withdrawal of particular claims in the response of 2-9-04, pp. 10-11, has been fully considered by the Examiner. Applicants traversal states that amendment to a "tissue sample" does not place it outside the elected group drawn to "a biological entity physically associated with an antigen". The traversal further states that "a tissue sample" is a species of "biological entity associated with an antigen" and refer to p. 34, lines 25-26 for such support. Page 34, lines 25-26 state that, "The biological entity can be provided as a tissue sample or in isolated form." While an "entity" is considered as being of a singular or individual existence, and would not necessarily apply to a tissue, the Examiner has adopted the Applicants view supported by the specification that "a tissue" is a species of "biological entity". As nearly all "biological entities" are noted to be "physically associated with an antigen" the groups of claims directed to an "isolated biological entity" and "biological entities physically

associated with an antigen” are deemed to be generic to species members of “a tissue sample” and “an amyloid deposit” as claimed and as argued by Applicants. Thus, species election only is required amongst the claims.

Election/Restriction

5. This application contains claims directed to the following patentably distinct species of the claimed invention:

A) Claims 50, 69-70, 73-80, and 98 directed to the species of “a tissue”.

B) Claims 90-97 directed to the species of “an amyloid deposit”.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species from A) and B) for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 81-89, and 99-100 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Any inquiry of a general nature or relating to the status of this general application should be directed to the Group receptionist whose telephone number is (703) 308-0196.

Papers relating to this application may be submitted to Technology Center 1600, Group 1640 by facsimile transmission. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). Should applicant wish to FAX a response, the current FAX number for Group 1600 is (703) 872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
